Summary

I am a team-oriented frontend developer, have 3+ years of experience in web and UX/UI design. I also learned how developers and designers interact and communicate from work experiences. I focus on clean and efficient code. I have worked on mobile application and web application development. I enjoy working closely with team members and work with a passion for both personal growths and for software development.

Version management

Git, Github

Server technologies

Node.js, Apache, MAMP, MAMP

Database

MySQL, SQLite, MongoDB

Others

Adobe Photoshop / Illustration / Premier, / After Effect, and Figma, inVision

OS

Mac, Window

Projects

Portfolio page / Web app - SPA / HTML, CSS, Vanilla Javascript, Git, Git page 2021.10 - 2022.03

The portfolio website was developed with HTML, CSS, and vanilla JavaScript and deployed by the git page for learning purposes. It has two theme colors that light mode and dark mode when you click a switch. There is a form that you can contact via email linked to my Gmail account. During building this web page I've learnt lots of stuff about the skills I used such as classList property that helps the code works clean and efficient.

Weather App / Mobile app - SPA / Personal Project / ReactNative, Expo Go 2022.02 - 2022.02

The weather forecast App has the weather API and catches the user's location with longitude and latitude. Used hooks 'useState' for storing days, city, and location service status, also used hooks 'useEffect' when it requests permission to get the user's location from the user. This app was developed using React Native and Expo Go.

Check your list / Mobile app - SPA / Personal Project / ReactNative, Expo Go 2022.02 - 2022.02

Developed a To-Do-List app. In this project, Async is used for storing, loading, editing and so on, the data what the user added. The data will be saved in JSON format, and parse the data as string values. Bring the data to the screen such as task, check box if user complete the task. This app was developed using React Native and Expo Go.

Messenger / Web app - SPA / Personal Project / React, Firebase, Chat Engin 2022.01 - 2022.01

This is a messenger web app based on firebase so user can login with Google or Facebook account. When the user click either Google or Facebook user will be redirected to what the user choose. Learned Chat engin API, Firebase and React.js as the primary frontend framework.

Fitness at Home / Web app / Group project in school / Vue.js, Springboot framework, Bootstrap 2.21.2(Latest for vue.js) 2021.03 - Current

Programmed one of the main services in this project is a 'Review board' that has CRUD functions which I played a role. Also, managed and assigned a task for each member and documentation of what each team member had worked on. This web app was developed using Vue.js with Bootstrap as the primary frontend framework, and Springboot as the primary backend framework.

Blurry Spoiler / Web app - SPA / Project for learning purpose / Eta framework, Vailla Javascript, Bootstrap 5 2022.01 - Current

Project for learning purpose with another friend. Playing a key role in developing in front-end development and UX/UI design. We are expecting to deploy and launch the service in July.
