OS	**Others**	
Mac, Window	Figma, inVision, Adobe Photoshop / Illustration	

Projects

Portfolio page / Web app - SPA / HTML, CSS, Vanilla Javcsript, Git, Git page   2021.10 - 2022.03
+ Link | https://haesunjo.github.io/haillie_portfolio/

The portfolio website was developed with HTML, CSS, and vanilla JavaScript and deployed by the git page for learning purposes. It has two theme colors that light mode and dark mode when you click a switch. There is a form that you can contact via email linked to my Gmail account. During building this web page I've learnt lots of stuff about the skills I used such as classList property that helps the code works clean and efficiently.

Weather App / Mobile app - SPA / Personal Project / React Native, Expo Go   2022.01 - 2022.02
+ Demo link | https://expo.dev/@haillie/WeatherApp

The weather forecast App has the weather API and catches the user's location with longitude and latitude. Used hooks 'useState' for storing days, city, and location service status, also used hooks useEffect' when it requests permission to get the user's location from the user. This app was developed using React Native and Expo Go.

Check your list / Mobile app - SPA / Personal Project / Reac tNative, Expo Go   2022.01 - 2022.02
+ Demo link | https://expo.dev/@haillie/projects/CheckYourList

Developed a To-Do-List app. In this project, Async is used for storing, loading, editing and so on, the data that the user added. The data will be saved in JSON format and parsed the data as string values. Bring the data to the screen such as task, check box if the user completes the task. This app was developed using React Native and Expo Go.

Messenger / Web app - SPA / Personal Project / React, Firebase, Chat Engin   2022.01 - 2022.02
+ Demo link | https://talk-and-chat-mastery.netlify.app/

This is a messenger web app based on firebase so users can log in with Google or Facebook accounts. When the user clicks either Google or Facebook user will be redirected to what the user chooses. Learned Chat engine API, Firebase and React.js as the primary frontend framework.

Fitness at Home / Web app / School project / Vue.js, Springboot, Bootstrap 2.21.2(Latest for vue.js)   2021.03 - Current
Programmed one of the main services in this project is a 'Review board' that has CRUD functions which I played a role. Also, managed and assigned a task for each member and documentation of what each team member had worked on. This web app was developed using Vue.js with Bootstrap as the primary frontend framework, and Sprinboot as the primary backend framework.

Blurry Spoiler / Web app - SPA / Project for learning purpose / Eta framwork, Vailla Javascript, Bootstrap 5   2022.01 - Current
Project for learning purpose with another friend. Playing a key role in developing in front-end development and UX/UI design. We are expecting to deploy and launch the service in July.
